

Experiment for Master Thesis "Human-in-the-Loop Workflow for Systematic Creation of Content for Scientific Knowledge Graphs" - Ahmed Malek Ghanmi

1 Introduction

You're stepping into a scenario where you are recreating an ORKG comparison based on a research interest you have. Imagine the process of creating your last comparison, but this time, you have access to a workflow designed to support you in this process. Your goal is to create an ORKG comparison with the help of the workflow.

As you perform each step, you are encouraged to use the **Think-Aloud Method**. Verbally share your thoughts, reasoning, and decisions as you interact with the workflow. Express what you think in real-time. Describe your expectations versus what happens as you complete each task.

2 Comparison

This is an overview of the comparison we are basing this experiment on. Please read it thoroughly.

Example comparison

Please navigate to the attached survey and start it. **Only** fill in the first two pages.

3 Workflow

After each stage of the workflow, you may answer a set of questions in the survey related to the stage you finished. **If you have any questions, feel free to share them at any time.**

If you already filled out the first two pages of the survey, let's navigate to the first notebook of the Workflow 'Stage1 Corpus Creation'.
